**Date:** February 23, 2015

**Re:** Image Archive Solution

---

The Information Technology department requests Commissioner's Court authorization to advertise a request for proposals to provide the county with a database server and storage solution. The request is included in the approved FY15 budget.

The basis for action is to seek proposals for an active-active Windows Server 2012 R2 cluster configuration with a direct fiber attached storage solution to serve the high transaction volume required of the county's production database systems.
